

# SCORING SQUARES *by*

*Team #2*

---

 THE WELL										

*Team #1*

Start by having each person choose a set number of squares at random or buy squares for \$1 to \$5 per square, marking choices with their name or initials. (10 people would choose 10 squares each) After all the squares are filled, draw numbers (0 to 9) out of a hat and assign each number to the frame moving from the left to right along the top of the grid, and top to bottom down the side of the grid. The object is to have chosen a square that corresponds with the LAST number in the score for each team. Winners selected at each quarter, if desired.
